ABOUT US

Our mission is to contribute to the success of our clients' brands. To grow with them. With our commitment to quality and service to satisfy their needs, all based on criteria of social responsibility, environmental sustainability and economic profitability.

2 Customer orientation

Germark's objective, by involving people, is to understand, assess and meet customer needs, delivering on commitments and proactively offering innovative and cost-effective solutions for identification

3 Social responsibility

We take responsibility for everyone in our company and their professional development, for our customers and suppliers, for the environment and for society.

Innovation

We see changes in the market as an opportunity to help our customers, using our skills to anticipate and improve processes, products and services.

Communication

We convey information, ideas and opinions in a clear and justified way. We provide the means for everyone to find a way to communicate with and from Germark.

Identification with the company

Identification with the company is something that characterises the people who work at Germark. To further develop this value, we must all work together to provide an exciting and inclusive work environment that values diversity and recognises individual and group contributions.

Sustainability

GREENMARK

GREENMARK is our sustainability programme to reduce our impact on the environment. This is where we group together all the measures we're taking:

- The solar power system that allows us to save 210.7 tons of CO₂ annually.
- The change from ink curing to LED curing, which saves over 50% in energy compared to traditional methods.
- Use of sustainable, recycled and FSC materials.
- Linerless and AD Circular programmes, thanks to the elimination and recycling of the silicon label backing, we manage to cut back on CO₂ emissions by 30%.

Certifications: FSC, ISO14001, ISO 9001:2000, Carbon Footprint

- Registration Certification, offsetting and CO₂ absorption projects.

DECORATIVE LABELS

Being consultants in packaging development means being directly involved in all the processes of creating our clients' brand image so that they can differentiate themselves from their competitors and increase their sales and productivity.

ADVERTISING LABELS

ELASTITAG

Unique, patented hanging label that adapts to any shape of packaging. Perfect for new product launches or cross-promotions without packaging changes.

COUPONS

A booklet label including a discount coupon directly available in the shop. Ideal for increasing sales and attracting new consumers.

STOP&BUY

A rigid material label that sticks out above the product to attract the consumer's attention at the point of sale.

FUNCTIONAL LABELS

➤ Multilayer labels

Ideal for large or additional information in a small space, often used in the chemical and pharmaceutical industries.

➤ Labeling solutions for the pharmaceutical industry

We specialise in pharmaceutical labelling solutions, predominantly of two types:

Tamper Evident: labels that guarantee the safety of the pharmaceutical product from production to consumption, helping to meet European compliance standards.

Hang Tag: developed for manufacturers of intravenous solutions, simplifying product logistics and making it easier to hang the bottle in the shortest possible time.

➤ Rigid Lens

The patented sealing label, which allows the quality of the inner product to be maintained while offering greater convenience, is designed to remain open until the user decides otherwise.

This is a more sustainable and cost-saving solution compared to other types of seal.

➤ Groupings

Labels that group several products together, which are more economical and practical than a box and provide greater customer convenience.

Opercle

A transparent adhesive label, an alternative to heat-sealing. When peeled off, the label leaves evidence of opening.

Oxygen barrier range

An oxygen barrier film in combination with pressure sensitive resealing adhesives. It allows for easy opening with the possibility of resealing, while creating a distinctive pack.

RFID systems

We are specialists in RFID systems, we can supply the best reading systems up to the total integration of RFID in the customer's ERP.

We select the best inlay/chip for your application and design any label with built-in RFID.
